Van Beek EPDM

Van Beek EPDM is a supplier of bespoke EPDM-rubber products. With our years of experience in roofing and ponds, we are more familiar with the stringent demands that are placed on waterproofing work than anyone else.

VB-EPDM rubber has a very favourable environmental impact factor and it is 100% ecologically sound (it does not leach out). The material offers the lowest environmental impacts during the entire lifecycle which puts it in the best environmental class according the Netherlands Institute for Building Biology and Ecology (NIBE).

EPDM is a synthetic single layer rubber membrane with a unique composition that guarantees a minimum lifespan of 40 years and minimal environmental impact. EPDM is ultra-resistant to ozone and UV aging, making it exceedingly weatherproof. There are no limits to EPDM's possible shapes or applications.

VB-EPDM membranes are made to measure in our factory, resulting in fewer seams and a shorter installation time.

Van Beek EPDM B.V. is also a supplier of Firestone RubberGard® systems.

Van Beek EPDM offers the best solution for every application.

- KOMO certified.
- Extensive quality control.
- FLL certified.
- Ideal for use as roofing under PV panels.

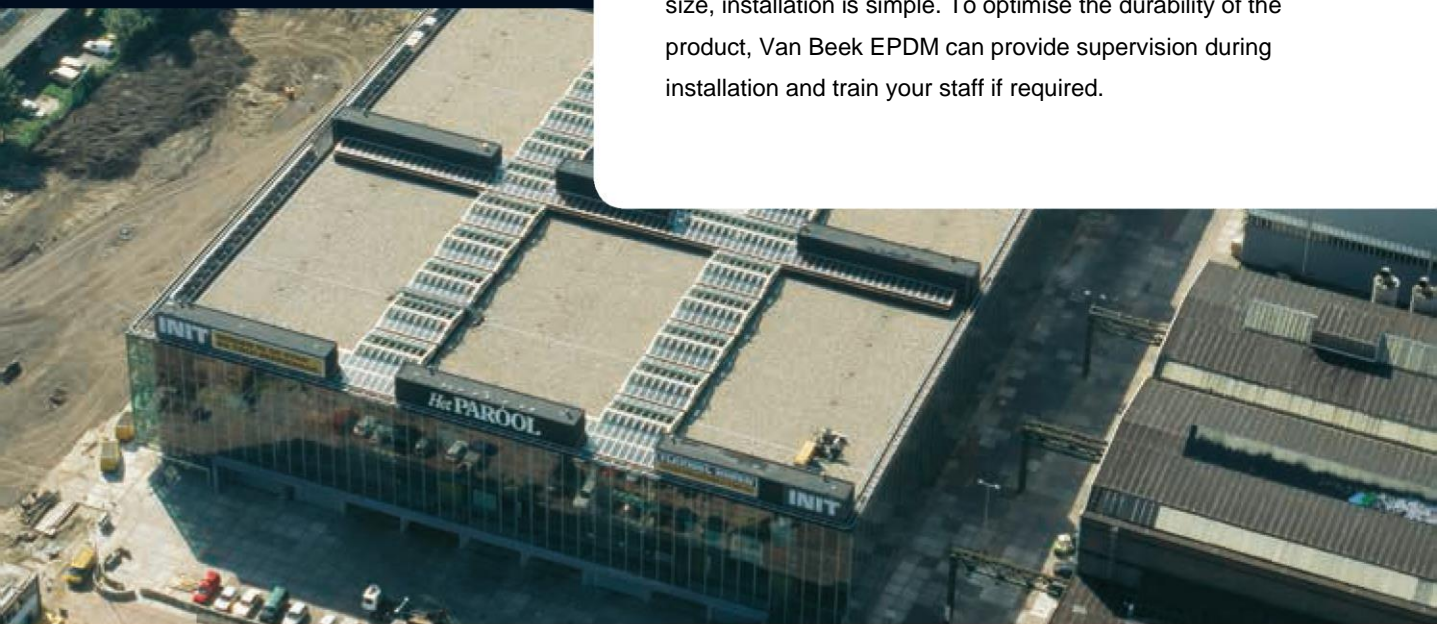

Limitless roofing

VB-EPDM 2D membranes

- Bitumen resistant
- UV and ozone resistant
- Permanent elasticity
- Long lifespan

Dimensions are not an issue in making your project permanently watertight. From commercial premises to dormer windows, any roof can be perfectly sealed with a membrane that has been custom made for you. Complex roof structures are no problem whatsoever. Welded seams are kept to a minimum and are indestructible thanks to our unique processing method. Each membrane comes with a 10-year warranty certificate.

We are also able to provide you with an Insurance Backed Guarantee on your project. As the membranes are delivered to size, installation is simple. To optimise the durability of the product, Van Beek EPDM can provide supervision during installation and train your staff if required.

Seamless sealing systems made from a single piece of EPDM

Permanent sealing systems

Complex shapes present no problems for the VB-EPDM system. With 3D membranes, all of your plans can be watertight. You can work out your ideas with the limitless options offered by our drawing program. We will make sure that the membranes are made to your exact specifications and consist of a single piece wherever possible. This makes installation on site a whole lot more straightforward.

VB-EPDM 3D membranes

- Unlimited applications
- Easy installation
- Seamless, made from a single piece

Specials

Our many years of experience in sealing mean we are able to offer customised solutions to specific requirements.

Our team of specialists will then join you in creating the optimum seal.

Whether the job involves a Biogas plant or special sealing sleeves, Van Beek EPDM will meet your most exacting needs.

Sharing knowledge for optimum results.

Service and training

Van Beek operates in a solutions-oriented and customer-oriented way.

It is for this reason that we have a training centre where we can train your workers to become all-round EPDM specialists. They will be taken through a complete programme that includes clear theoretical and inspiring practical classes.

On request, we can send our instructors to the site to provide support for your project. We are happy to share our knowledge. Consequently, the final result will be optimised, resulting in complete satisfaction of your customer.
